

-17-

The claims defining the invention are as follows:

- Sub B & C
1. An elongated pre-cast concrete element, said element having:
longitudinally extending upper and lower generally parallel surfaces that enable
the element to be stacked with like elements when horizontally oriented; and
5 longitudinally extending convex side surfaces joining the upper and lower
surfaces.
 2. The element of claim 1, further having end surfaces and a longitudinal
passage extending between said end surfaces.
 3. The element of claim 2, further including a reinforcing element located
10 in said passage so as to extend between said end surfaces.
 - 2/21 4. A wall structure including a plurality of elements, each element being
an element according to claims 1, 2 or 3, wherein the elements are stacked so each
element is generally horizontally oriented.
 5. The wall structure according to claim 4, whereby between adjacent
15 upper and lower surfaces of adjoining elements is a layer of mortar or cement.
